Election/Restrictions

4. Restriction to one of the following inventions is required under 35 U.S.C. 121 and 372:
This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in response to this Action, to elect a single invention to which the claims must be restricted:

- I. Claim 38, drawn to a humanized rabbit cholesteryl ester transfer protein (CETP) comprising the amino acid sequence of SEQ ID NO: 5.
- II. Claim 39, drawn to a humanized rabbit cholesteryl ester transfer protein comprising the amino acid sequence of SEQ ID NO: 6.
- III. Claims 40-48, 51 and 52, drawn to a method of modulating the level of endogenous active cholesteryl ester transfer protein (CETP) in a mammal comprising administering to the mammal a whole, non-endogenous CETP from xenogeneic CETP.

- IV. Claims 40-48, 51 and 52, drawn to a method of modulating the level of endogenous active cholesteryl ester transfer protein (CETP) in a mammal comprising administering to the mammal from an allelic variant of the mammal's endogenous CETP.
- V. Claims 40-48, 51 and 52, drawn to a method of modulating the level of endogenous active cholesteryl ester transfer protein (CETP) in a mammal comprising administering to the mammal a whole, non-endogenous CETP from a mammalianized, non-endogenous CETP in which the amino acid sequence of a non-endogenous CETP has been altered by deletion or substitution of one or more amino acids.
- VI. Claims 40-45 and 49- 52, drawn to a method of modulating the level of endogenous active cholesteryl ester transfer protein (CETP) in a mammal comprising administering to the mammal a plasmid-based vaccine.

The inventions listed as Groups I-VI above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Ha *et al* (Biochemica et Biophysica Acta 833: 203-210, 1985; PTO 1449) teach a method for modulating the level of endogenous cholesteryl ester transfer protein (CETP) in a rat, which is a mammal, comprising administering to the rat a whole exogenous lipid transfer protein from human, which is non-endogenous CETP, that reduces cholesteryl ester transfer activity to about 20% at 24 hour as recited in claim 40 (See page 204 Method; page 208, Discussion in particular).

Since Applicant's Inventions do not contribute a special technical feature when viewed over the prior art, Groups I-VI are not so linked by the same or a corresponding special technical feature as to form a single general inventive concept and therefore lack unity of invention.

- 5. Because these inventions are distinct for the reasons given above and the searches are not co-extensive, restriction for examination purposes as indicated is proper.
- 6. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.

Art Unit: 1644

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).
